I've entered the game via WeMod application. The cheat opens, but it's not active in the game. The game was downloaded via the EA app, and I checked that it has a key. I don't get any errors like ssleay32.dll error; it just sounds like the cheat is working, but the cheat itself isn't active. I bought my PC version through a disc when the game first hit the market. My system specs are: Intel i9 12900K, ASUS Prime Z790-V WIFI, 32GB DDR5 2400mhz ram, and nVidi RTX 4070. Upon examining my WeMod library, I see folders for Crysis 3 and Mass Effect 3 in the game source area. I'm unsure if a Pro version is required to include these features. The trainer for PC has also crashed, and it seems like there isn't an updated 1.3 trainer available for Crysis 3. I have Avast installed on my system, which blocks the download link. A possible workaround could be to switch to Baidu Antivirus + Malwarebytes Premium instead. Regarding updating the trainer, I'd appreciate an update soon; it's been a while since the last one. Lastly, when using the Origin version, the game instantly crashes after activating the trainer. Never found a trainer that doesn't crash due to anti-cheat triggers in this game. Need a version for file 1.3.0.0, please upload and update the trainer. Original issue was with Inf.Ammo not affecting bolts for bow, however, it works as expected otherwise. Requested option to add infinite bow arrows since they are finite. Current game version is 1.30 and trainer needs an update. Missing CryEA.dll after running trainer, please help. Great job on the trainer, would like to donate but also need updates for Crysis 2 & 3 trainers. New trainer added with additional cheats, now trying out Crysis 3. Need a 1.6 update as upgrade points cheat isn't working. Inf Upgrade Points not functioning properly; any solutions? Warning about using infinite upgrades on Origin, it reduces suit upgrade limit. Trainer didn't work for me, tried others but none worked. Fix needed for Windows 10 version. Current trainer password is mrantifun.net. Issue with disable anticheats and fully updated game being required to activate the trainer. Requesting update for Digital Deluxe edition as well, specifically fixing Inf.Ammo amount limit from 9 to 9999. Hello, I'm here to help! Unfortunately, the current trainer doesn't work with the 1.3 version of Crysis. The infinite upgrade points feature isn't working either, and I'd love it if we could get an update for Origin game versions. Can you please make a new trainer that works for the latest Origin game version? Even though I've activated the cheat correctly, my game still crashes when I try to disable anti-cheat triggers. Your help would be super appreciated! Can we get an update for the Crysis 3 trainer? I see that there isn't a 1.3 version available, possibly to update it? Avast has blocked the download link; never had such problems before. Any workaround guys? Avast is notorious for blocking trainers. Please update to 1.3 When trying to use this with Origin, my game instantly crashes after activating the trainer. Anything I can try? Thanks. Crysis 3 V1.0.0.1 Trainer +3 Options: Inf.Health Inf.Energy Inf.Ammo Notice: Trainer password : mrantifun.net First start game then activate the trainer. Works wonderful, 1Hour NO CRASH!!! Yup confirm the trainer still insta-crash as soon as cheats activated. Would love to see an updaters for the latest Origin release also a Disable anti-cheats option if possible. File version is 1.3.0.0 plz upload trainer for it It would be nice that we have updated version of the trainer Thanks for the trainer though noticed Inf.Ammo doesnt affect bolts for bow not sure if its supposed to do that or just me other than that works like a charm. Page 3 hi could u please add an option for bow arrows they are not infinite. This trainer deserves an update current game version is 1.30 need new trainer CryEA.dll missing dont know why after running this trainer help thanks Thanks Mrantifun for all these awesome trainers just donated to the account if also you can update these crysis 2 & 3 trainer that'd be great --- Would definite donate more later on -- Thanks Wanted to alert users that using infinite upgrades on Origin can prevent suit upgrades from being available. The upgrade indicator may display "99" but actually be set to "0". Is there a workaround or fix? Some users have reported issues with certain trainers, including those who use Windows 10.
